## **Assignment#1**

### **Topic: Inconvenient things in daily life (Innovative Ideas)**

#### **1. Car Parking in huge malls:**

a. Problem:

I want automated car parking, I leave my locked car at one place and it gets parked by itself.

b. Solution:

There are car parking structures (preferably underground because it would be space saving), over which cars can be stacked. I leave locked car on one moveable metal bar and I get ticket on my mobile. This bar carry car to available car slot. Then, whenever I'm free, I'll come back and scan ticket to machine. Then I'll get my car. I don't have to go and search for available place. It's time saving.

#### **2. Adding Expiration date to money:**

a. Problem:

People accumulating money in banks. Rich people getting richer and poor ones getting poorer.

b. Solution:

Government should add expiration date of 1 or 2 years with each Yuan. So that people won't be able to accumulate money in bank accounts. Money would circulate in society evenly. After certain time, expired money will be the property of government and will be confiscated without notifying. In this way, one will be able to store money at all. This can help in crime and corruption reduction.

#### **3. Energy generation:**

a. Problem:

Energy crisis in country

b. Solution:

Installing Panel on road and streets that store kinetic energy and producing electricity. For example huge number of cars on roads and large number of people walking on streets can help contributing generation of electric power.
